SMALL
SAMPLE

PROJECT WORK

calculator projects

built 4 different functional calculators in various platforms - 1) browser with javascript, 2) android studio and 3/4 in iOS. One was built using a storyboard and the other using swift UI.

Andriod software development

concept application developed in android studio that creates lists of items, quantities and amounts and then tallies the list. makes use of a drop-down menu to store and retain user settings in phone memory

Logo Design

Testimonials are short quotes from people who love your brand. It's a great way to convince customers to try your services.

Image and Website Design

Created a series of visual collateral materials, including the logo for a start-up venture. Created a video and overall look for the website: www.varaplatforms.com

iOS software development

As part of a school project, the team built an iOS application - sMail - that allows users to log into their gmail account to view emails. you can also view folders, create drafts and send emails.

LET'S
WORK
TOGETHER.
